

Ready - steady- MOVE!

Woogsviertel - What will Mobilities look like in 2030?

Stegreif - 2 CP

Topic

In this Stegreif, you will design strong visions for urban sustainable mobilities in Darmstadt's Woogsviertel for the year 2030. Based on current developments in mobility transformation and climate change, participants will create 3 different scenarios for 2030: First, current politics, planning and behaviors remains unchanged, second, architects had it their way, and third, a scenario that integrates the „wishlist“ with pragmatic opportunities. You will visualize all three scenarios as a series of Din A 2 - posters to be exhibited in the Woogsviertel streets.

The Stegreif is part of the project Urban SCOPE, a transnational interdisciplinary project funded by the European Union, in which three cities – Glyfada, Győr and Darmstadt - have teamed up with University Utrecht, Széchenyi István University and TU Darmstadt to promote sustainable urban mobility through education and active citizen participation in urban planning.

Dates

07.06.2021 /10:00	Task presentation via zoom Introduction to the topic + questions and answers
21.06.2021 /10:00	Submission via email Presentation of the projects via zoom
